Art Unit: 1652

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, 11-27 and 32-36, drawn to a Herpes simplex virus recombinase, a method of promoting homologous recombination comprising using a Herpes simplex virus recombinase, a cloning kit, a method of treating a eukaryotic host cell comprising using a Herpes simplex virus recombinase, a method of treating an organism and a method of making a modified host cell, classified in class 435, subclass 199, 91.1.
- II. Claims 8-10, drawn to a host cell comprising a Herpes simplex virus recombinase, classified in class 435, subclass 363 or 348.
- III. Claims 28-31, drawn to a method of obtaining a transgenic animal, classified in class 800, subclass 21.

The inventions are distinct, each from the other because:

Group I involves a recombinase while group II involves a host cell comprising polynucleotide encoding the various parts of the recombinase. The recombinase and the polynucleotides are different chemical compounds and therefore the groups are patentably distinct. In addition, group II involves cloning the polynucleotides while group I does not.

The method of obtaining a transgenic organism of group III involves different steps and methods than obtaining simple host cells and is therefore patentably distinct.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1652

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
